Cameron Van Orman

Web Application Developer

I'm an experienced web and application developer located in Seattle, WA with recent experience working at companies like Google, Amazon, and Concur. My passion for gaming led me to start a company called Blue Beetle Technology that supports the gaming community through game hosting and web development. I am deeply passionate about my work and I'm always looking to sharpen my skills to stay on the cutting edge of web development, cyber security, and internet gaming.

Experience

efelle creative

Application Developer (2016 - Present)

As part of a three person development team, my focus is on supporting and maintaining active legacy applications as well as contributing to the designing, planning, and development of the company's new platform, FusionCMS, through weekly development sprints. Additionally, I am responsible for creating, maintaining, and monitoring company and client servers.

Notable contributions include:

→ Upgrading the legacy platform's password hashing procedure to be secure and inline with NIST standards. PBKDF2 with a generated Salt value was implemented to ensure backwards compatibility with the legacy codebase.

→ Developed an application, Atlas, that tracks all of the company's servers, backups, and cost in our primary cloud provider.

→ Developed import processes for transferring content between content management platforms, such as WordPress, and the company's new platform, FusionCMS v5.

→ Developed UI components such as sorting and nesting functionality in FusionCMS v5. This allows clients to customize parent/child relationships as well as allow for sorting pages, blog posts, categories, menu entries, and users.

→ Managed fleet of 270 Virtual Machines, Firewall Rules, Reverse Proxies, as well as handle all support and incident response related to application and client infrastructure. Delivered a 99.98% SLA across all web services.

Front-end Developer (2015 - 2016)

Worked within a tightly knit team of front-end web developers, designers, and account managers at a large digital agency. While working on client projects, I contributed to the development of internal frameworks. Developed and documented common boilerplate code for junior members of our development team to use during projects. Additionally, I configured deployments to client hosting environments, as well as wrote documentation for git best practices and code reviews.

Freelance

Web Developer (2014 – 2015)

After working at a small fast-paced agency, I began to freelance by offering technical services to small businesses on a budget. Client work ranged from building static HTML pages for a Baton Rouge, LA based lawn care company, to a full website for a Spokane, WA based hardwood flooring company.

V2Works

Web Producer (2014)

Worked with designers and agency executives to plan and develop custom applications for clients. As the agency's primary developer, I worked to develop custom product kiosks for trade-shows, make updates and fixes to existing client websites, build templates for WordPress, and build HTML marketing emails for client's weekly newsletters.

Concur

Web Developer (2013 – 2014)

Working with the Global Marketing team to build new websites for Concur's international websites. As part of a small team of 6 developers, we utilized Drupal to build custom fields and interactive functionality into various page types and templates. These templates were then used by the production teams to create new pages and input content.

Amazon

Customer Connection Digital Specialist (2012 – 2013)

Worked with customers over the phone to solve technical problems. Issues that were reported within Amazon's Kindle devices, Instant Video service, or the Appstore for Android were resolved through troubleshooting or escalating to the appropriate development team.

Randstad at Google

Visual Data Specialist (2010 – 2012)

As a contractor within a large project at Google, I worked with geographic data to improve navigation and mapping data for end-users. My role was to audit edits made to Google Maps by users and other contractors as well as assist in training new team members to interact with and guide community mappers.

Skills

Operating Systems
Windows, Linux (Ubuntu / CentOS), Mac OSX

Platforms
WordPress, Contentful, BigCommerce

Languages
PHP, Javascript, CSS, HTML

Databases
MySQL 5+, MariaDB

Frameworks
Bootstrap, Tailwind, Foundation, Laravel, jQuery, Vue, Blade, Twig, Handlebars, SCSS

Tools
Webpack, Gulp, Git, NPM, Yarn

Projects

Name	Platform/Frameworks	Development Role	Launched
Buell Realtime	FusionCMS	Front-end	July 7, 2016
